

You're using Unlock_ALD

**This is only the testversion to let you try before buying.
Unlock_ALD as a testversion needs this pdf file here in the same
directory.**

If you think this app could be useful for your needs you can buy the full version for a reasonable price without this message-pdf. You'll get a license for unlimited usage inside your published/distributed apps and projects.

What can Unlock_ALD do for you?

It's a console-app to free pdf-files from special security settings. Processing a pdf-file with Unlock_ALD which was created with Adobe-products before, makes further processing with any third party tool or again an Adobe product possible.

No more messages from the Adobe reader telling you „that the document has been changed... and use of extended features is no longer possible“!

Special settings interfere while using a pdf? The processing with Unlock_ALD will make it better!

You can call the app with parameters from the command-line (cmd)... embedded inside a batch-file (*.bat or *.cmd)... or via shell-syntax from inside your apps.

You'll find samples (for batch-files, vb.net, vb6, Delphi, C#) as well as a complete test-app (exe) and a small guide (unlock_ald.pdf/unlock_ald.txt) inside the zip-package.

You can buy Unlock_ALD at...

<https://www.PDF-Analyzer.com> (english website) or
<https://www.IS-Soft.de> (german website)
